OADM-4 plug-in module is a passive optical multiplexer /demultiplexer designed to add and drop CWDM channels to an existing backbone ring. The module multiplexes and demultiplexes four CWDM wavelengths from a two-fiber ring, going in opposite directions into a network (east/west).

This OADM module plugs into one half of a 1RU, 19” rack mount chassis for simple installation and modularity. This Chassis based system offers network equipment manufacturers a more scalable and higher-density solution to add CWDM capability to their existing and new networks with simple pluggable interface.

Finisar’s OADM product delivers dramatic cost savings to network equipment manufacturers, enabling them to develop metro access systems that are lower in cost, easier to provision and simpler to operate.
