Solutions Guide

FINISAR

Pluggable Optics for the Data Center
The data center ecosystem is going through unprecedented growth and innovation as new players, new business models and new technologies converge. One of the key trends is the growing importance and evolving landscape of fiber optic technologies enabling new architectures and enhanced levels of performance in the data center.

Fiber optics is no longer an optional technology, or only reserved for the toughest interconnect problems. Bandwidth, port density and low-power demands now require fiber optics. And fiber optics is now a pervasive, high-volume, low-cost set of technologies that make it an easy choice for switch interconnect and server I/O.

Finisar is investing heavily in the data center. Our 10G, 25G, 40G and 100G fiber optic products are enabling the highest bandwidth, highest density, lowest power and lowest total cost interconnect solutions on the market today. And we are already working on 200G, 400G and beyond. We are ready to partner with you to push optical interconnect technologies even further to enable unprecedented scale, bandwidth, flexibility and efficiency to the modern, highly-interconnected data center.

**Extend Your Data Center Reach**

Finisar optical products span all Ethernet data rates currently deployed, from 100Mb/s to 100Gb/s, and we’re leading the market with our 25G Ethernet optical transceivers for next-generation servers and switches. Our QSFP products support link distances of up to 400 meters over multimode fiber, well beyond the IEEE Ethernet standard. We also support distances over single mode fiber of up to 20km on 100G QSFP28, 40km on 40G QSFP+ and 80km on 10G SFP+. And if you need to connect your data centers over metropolitan or regional networks, our OIF and CFP2-ACO modules can support distances beyond 500km.

**Re-Utilize Your Legacy Multimode Fiber Plant**

Most data centers today are still architected around 10G Ethernet, focused on 10GBASE-SR links over OM3/OM4 duplex multimode fiber. As data center operators migrate from 10G to 40G and 100G, they want to maintain that existing fiber infrastructure. However, SR4 interfaces require ribbon multimode fiber, and LR4 requires duplex single mode fiber, neither of which are present in the existing duplex multimode fiber plant. Finisar today is supplying QSFP+ LM4 transceivers which allow the use of duplex multimode fiber for 40G Ethernet links, and has introduced SWDM4 solutions which provide cost-effective duplex multimode fiber links for both 40G and 100G Ethernet.

**Increase Density and Consume Less Power**

Finisar understands the importance of heat management in the data center, and has been at the forefront of providing next-generation lower power dissipation optical products.

Our 100G QSFP28 optical transceivers (SR4, LR4, CWDM4, and SWDM4) support a maximum power dissipation performance of 3.5 Watts.

Our 40G and 100G Quadwire Active Optical Cables provide low-power dissipation settings which the host system can utilize.

We are the market leader in the supply of 12x10G and 12x25G on-board optical Tx/Rx modules, or BOAs. On-board optics enable increased port density while minimizing power dissipation.

**Move beyond 100G to 200G / 400G**

Finisar has been the market leader in 100G Ethernet modules, supplying CFP modules to service provider router and transport deployments since 2010. We have now expanded our 100G product offering to include various types of CFP2, CFP4, CXP and QSFP28 modules, for telecom and also the emerging data center and enterprise 100G applications. However, we’re not stopping there. We currently have a leading role in standardization activities and are already developing our next-generation Ethernet products, which will support 50G, 200G and 400G data rates in modules like CFP8, QSFP56, and QSFP-DD. These products will meet the performance demands of high-performance data centers for many years to come.
The Modern Highly-Interconnected Data Center

## Finisar Products for the Data Center

### Intra-rack
- 10G & 25G SFPwire*
- 10G SFP+ SR
- 25G SFP28 SR (incl. low latency version)
- 4x10G QSFP+ SR
- 4x25G QSFP28 SR (incl. low latency version)
- BOA (optical engine)
- 4x10G Breakout AOC
- 4x25 Breakout AOC

### Long span/Inter-building
- 10G SFP+ LR/Bidi/ xWDM/Tunable 10/40/80km SMF
- 25G SFP28 LR 10km SMF
- 40G QSFP+ LR4/ER4 10/40km SMF
- 100G QSFP28 CWDM4/LR4/eLR4 2/10/20km SMF
- 100G CFP4 LR4 10km SMF
- 100G CFP2 LR4 10km SMF
- 100G CFP LR4 10km SMF
- CFP2-ACO Metro/Long Haul DWDM SMF

### Inter-rack
- 10G SFP+ SR 400m OM4 MMF
- 10G & 25G SFPwire* Up to 30m
- 25G SFP28 SR 400m OM4 MMF
- 40G QSFP+ SR4 400m OM4 MMF
- 40G Quadwire* Up to 100m
- 100G QSFP28 SR4 400m OM4 MMF
- 100G Quadwire* Up to 100m
- 100G CXP SR10 150m OM4 MMF
- 100G C.wire* Up to 100m
About Finisar

Finisar is a global technology leader in optical communications components and subsystems. These products enable high-speed voice, video and data communications for networking, storage, wireless, and cable TV applications. For more than 25 years, Finisar has provided critical breakthroughs in optics technologies and has supplied system manufacturers with the production volumes needed to meet the expanding demand for network bandwidth. Finisar’s industry-leading products include optical transceivers, optical engines, active optical cables, optical components, optical instrumentation, ROADM & wavelength management, optical amplifiers, and RF-over-Fiber.

As the market share leader and world’s largest supplier of optical components and subsystems, Finisar achieved over $1B revenue in FY2016 and currently has 14,000 employees across the globe.
